

Document ID: SEC-POL-2026-04

Classification: Internal

1. Data classification

Public: marketing pages. Internal: product specs and engineering standards. Confidential: customer documents, embeddings, and traces. Restricted: credentials, payroll, and government identifiers.

2. Access control

Production access uses SSO plus hardware security keys. Privileged roles are reviewed quarterly. Shared root passwords are forbidden.

3. Retention

Customer documents remain until the customer deletes them or the contract ends. Traces for Starter accounts are deleted after 7 days. Team traces after 90 days. Enterprise traces after 365 days unless a legal hold is active.

4. Encryption

Data in transit uses TLS 1.2 or newer. Data at rest in PostgreSQL uses AES-256. Embedding indexes inherit the same volume encryption.

5. Vendor LLM use

Customer content must not be sent to a third-party model provider unless the customer has enabled that provider in the Nimbus admin console. The default deployment uses a self-hosted Ollama model named llama3.2.

6. Breach notification

Security must be notified at security@aethercorp.example within 1 hour of suspected unauthorized access. Customers are notified within 72 hours when Confidential or Restricted data is involved.

7. Acceptable use

Staff may not paste customer documents into personal AI tools. Violations may result in termination.
